

SYMBIO COMPOST TEA BREW PACKS

Benefits

- ✓ *Boosts the soil food web in your soils*
- ✓ *Increases the disease resistance of your grass and rootzone*
- ✓ *Promotes establishment and longevity of fine grasses*
- ✓ *Greatly improves root mass and increases nutrient uptake*
- ✓ *Increases plant tolerance to drought and stress conditions*

Complete Compost Tea Package for use with all Compost Tea Brewers

The **SYMBIO COMPOST TEA PACK** has been specially formulated using Symbio's composting microbial technology. Supported by the research of SOILFOODWEB Inc. to enhance the conditions required for excellent growth of fine grasses on sports turf.

CONTAINS

- ✓ Specially formulated compost high in natural soil fungi and essential bacteria, along with protozoa and beneficial nematodes.
- ✓ Molasses for microorganism growth.
- ✓ Humic Acid for fungal growth.
- ✓ A selection of plant based key nutrients.
- ✓ Highly porous minerals to provide a protective support for the growing micro-organisms.

PACK SIZE: 100L

HOW TO APPLY Simply add the ingredients to water in your Compost Tea brewer. Allow to brew for 18-24 hours, (brewing can be longer if necessary, but feed the brew with 250mls of a biostimulant (Symbio Seaweed, CMS Shoot or Fish Hydrolysate) at least every 24-36 hours) for a rich Compost Tea Brew, which will help you break the fertiliser, disease, fungicide cycle in your soil.

Follow the instructions in your Compost Tea manual for best results.

Compost Tea is not a pesticide but plants growing in healthy soil are less susceptible to many common diseases.

HEALTH AND SAFETY S2 Keep out of the reach of children. S8 Keep container dry. S13 Keep away from food, drink and animal foodstuffs. S20 When using, do not eat or drink. S22 Do not breathe dust. S24/25 Avoid contact with skin and eyes. S36/39 Wear suitable protective clothing and eye/face protection.

QUANTITIES AND TIMING

For soils that have been subjected to heavy inorganic fertiliser and pesticide use, apply every 7 days for the first three applications and then every 2 or 3 weeks. If the sward has traditionally been subject to bad attacks of disease, increase the frequency of application just before disease usually attacks and during times when disease is usually prevalent.

For soils which have had fewer inorganic fertiliser inputs, apply every two weeks for the first two applications, then on a monthly basis.

Dilute approx 100 litres of Compost Tea in 300 – 750 litres of clean water per hectare.

To help solve specific problems Symbio supplies a range of additives. Each rootzone will react differently so please liaise with your Symbio Technical Manager to work out any special requirements and the best frequency of application.

For best results use Compost Teas with Symbio GreenCircle or ThatchEater and Symbio MycoGro Complete fertilisers.
