

SYMBIO MYCOGRO FERTILISERS WITH THATCHEATING FUNGI

Benefits

- ✓ *Fungi convert thatch, dead moss and grass clippings to humus*
- ✓ *Bacteria solubilise and retain nutrients*
- ✓ *Assists germination*
- ✓ *Creates the biology needed for perennial grass growth*

Part **Organic Fertilisers** with a unique blend of **rhizo bacteria and fungi**

ORGANIC AND PART ORGANIC

- ✓ Symbio 12.2.9 50% Organic Slow Release

INORGANIC SLOW RELEASE

- ✓ Symbio 15.2.15 15% SCU Slow Release
- ✓ Symbio 7.0.10 with additional ThatchEating fungi
- ✓ Symbio 9.3.14 + 2% Mg + 2%Fe

These fertilisers are designed to give immediate growth with a long lasting slow release element. Ideally applied in late spring or early summer, they can be applied during the summer months.

APPLICATION AND TIMING

Part organic fertilisers should be applied at 35gms -75 gms per sq.m. Inorganic fertilisers at 25gms – 35gm per sq.m and watered in in the absence of rain.

The fungi and bacteria are activated by moisture. For best results apply before rain is forecast or irrigate for 2-3 minutes after application.

These fertilisers may be applied via any standard fertiliser spreader

HEALTH AND SAFETY

S20/ 21 When using, do not eat, drink or smoke. S22 Do not breathe dust. S24/25 Avoid contact with skin and eyes. S27/28 After contact with skin, take off immediately all contaminated clothing, and wash immediately with plenty of soap and water.
