

# SYMBIO MYCOFORCE WHIPDIP

## Benefits

- ✓ **Improves transplant survival rates**
- ✓ **Accelerates growth rates**
- ✓ **Increases plant growth in poor soils**
- ✓ **Reduces need for fertiliser, fungicide and water**
- ✓ **Increases the natural vigour and health of the plant**

**AN ENDO (VAM) AND ECTO MYCORRHIZAL INOCULANT FOR ALMOST ALL\* WHIPS, BAREROOT TREES, SHRUBS, SEEDLINGS, CUTTINGS AND SMALL CONTAINERISED PLANTS. EASY TO APPLY AS A ROOT DIP JUST BEFORE PLANTING.**

### CONTAINS

**Endo Mycorrhizal species** – *Glomus claraum*, *G. intraradices*, *G. mosseae*, *G. deserticola*, *G. monosporum*, *G. aggregatum*, *Paraglomus brasilianum*, *Gigaspora margarita* and *G. etunicatum*  
**Ecto Mycorrhizal species** – *Rhizopogon villosullus*, *R. luteolus*, *R. amylopogon*, *R. fulvigeba*, *Pisolithus tinctorius*, *Laccaria bicolor*, *L. laccata*, *Scleroderma cepa* and *S. citrinum*. Beneficial soil bacteria and fungi, Zeolite, Trace Elements.  
Additional sachet of swell gels.

### FOR BEST RESULTS

Mycorrhizae help establish plants in poor quality soils but to get the best results from your plants, transplant into a soil high in organic matter. When planting into contaminated or compromised soils, contact our technical team for assistance with complementary soil amendments or soil bio-remediation. If applying fertiliser, use a low dose of slow release, preferably organic fertiliser, with a low phosphate content. Mycorrhizal plants do not need heavy applications of fertiliser. (See MycoForce fertilisers) Mycorrhizal plants have a greater natural

health and vigour. Healthier plants are more resistant to disease. If fungicides are needed, please refer to our advice sheet on fungicide compatibility and application. Herbicides and insecticides which do not harm the plant do not interfere with mycorrhizal fungal development.

### STORAGE

MycoForce Whip Dip will last at least 18 months, prior to mixing, if kept in a cool dry place. Do not freeze or expose to direct sunlight. Apply within 12 hours of mixing with water.

### SPECIES COMPATABILITY

\* All trees and shrubs except Laurels, Rhododendrons, Azaleas, all other ericaceous species, orchids and brassicas.

### SMALL PRINT

Symbio offers MycoForce Whip Dip for sale but takes no responsibility for fitness for purpose which extends beyond the specification sheet or accompanying literature. Symbio is limited in liability to the replacement of any product that does not meet the label or data sheet specifications.

### TECHNICAL SUPPORT

For further information or advice on how best to incorporate mycorrhizal inoculants into your planting programme, please contact Symbio.

### APPLICATION RATE & DIRECTIONS

**To make sufficient Dip for 220 whips or 1000 seedlings:**  
Add 1 hydrogel sachet to 3-6 litres of water\* which will form a light paste after a few minutes. Thoroughly mix 100g of Whip Dip powder into the paste. Dip bare-root whips just before planting. (If dipped offsite, cover roots in plastic during transport)

\*Actual hydrogel and water requirement will depend upon water hardness and plant root mass

100gms will treat 220 bare root trees and up to 2000 seedlings.

### Precaution

Avoid breathing dust. In case of inadequate ventilation, wear respiratory protection

**IF INHALED:** If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing. If experiencing respiratory symptoms call a doctor/physician. Dispose of contents/container in accordance with local regulations

### PACK SIZE

300g • 1kg • 5kg • 10kg
