

SYMBIO FULVIC BOOSTER LIQUID

Benefits

- ✓ *Chelates nutrients making them more available to the plant*
- ✓ *Improves growth in low light ideal for early and late season growth*
- ✓ *Reduces transpiration, drought stress and irrigation requirement*
- ✓ *Thickens cell walls for stronger plants and a cleaner cut*
- ✓ *May be tank mixed with most liquid organic and inorganic fertilisers and wetting agents*

Symbio Fulvic Booster is a soil and foliar treatment rich in fulvic acid derived from natural substances.

FULVIC ACIDS together with humates and humic acids are a major part of soil organic matter and stimulate beneficial microbial populations, increase soil cation exchange capacity and chelate mineral nutrients and trace elements making them more available for improved plant growth.

FULVIC ACID is limited in sports turf rootzones and should be added regularly during the growing season.

FULVIC BOOSTER may be combined with all Symbio microbial additives and compost teas. Test a sample before mixing with any inorganic products

SYMBIO FULVIC BOOSTER is a chelating agent that will make many organic and inorganic fertilisers and chemical applications more readily available to the plant. It may be tank mixed with most liquids but **WE STRONGLY ADVISE** that a jar test be carried out before mixing products in your spray tank. Allow the product to sit and settle for 24 hours and then decant and use the suspension avoiding using the sediment layer at the bottom, which could disrupt and interfere with the application but also equipment – spray nozzles.

Precaution

- IF SWALLOWED** Rinse Mouth, Do not induce vomiting
- IF ON SKIN** Gently wash with plenty of soap and water
- IF IN EYES** Rinse cautiously with water for several minutes

PACK SIZE: 10L

APPLICATION AND TIMING

Tank mix with Symbio BioBooster Fish Hydrolysate for best results.

Turf management apply 2.5 -5 litres per hectare monthly through the growing season, you may apply with liquid fertilisers and wetting agents. If tank mixing with other products follow manufacturers recommendations.

Drought stress apply 10 litres per hectare, may be tank mixed with most wetting agents.

Chelating Agent add 5 litres per hectare. Prediluted.

Foliar application dilute in 200-300L of water per hectare. Soil drench, dilute in 400-600L of water per hectare.

*Fulvic 30 Booster can be tank mixed with most biostimulants, fungicides, liquid organic and inorganic fertilisers. **Always run a bucket trial to test compatibility before tank mixing***
