

Making Your soil work for you

# MYCOFORCE WHIP DIP

- ◆ Improves transplant survival rates
- ◆ Accelerates growth rates
- ◆ Increases plant growth in poor soils
- ◆ Reduces need for fertiliser and fungicide
- ◆ Increases resistance to stress and disease

**AN ENDO (VAM) AND ECTO MYCORRHIZAL INOCULANT FOR ALMOST ALL\* WHIPS, BAREROOT TREES, SHRUBS, SEEDLINGS, CUTTINGS AND SMALL CONTAINERISED PLANTS. EASY TO APPLY AS A ROOT DIP JUST BEFORE PLANTING.**

## CONTAINS

Endo Mycorrhizal species - *Glomus clarum*, *G. intraradices*, *G. mosseae*, *G. deserticola*, *G. monosporus*, *G. brasilianum*, *Gigaspora margarita*.

Ecto Mycorrhizal species - *Pisolithus tinctorius*, *Rhizopogon sp.* Biofixed beneficial soil bacteria and fungi, Biofixed beneficial soil bacteria and fungi, (*Bacillus spp.*, *Pseudomonas spp.*, *Arthrobacter sp.*, *Acetobacter sp.*, *Lactobacillus sp.*, *Lactococcus sp.*, *Comamonas sp.*, *Nitrosomonas sp.*, *Nitrobacter sp.*, *Rhizopus sp.*, *Phanerochaete sp.*, *Saccharomyces sp.*, *Sporotrichum sp.*) Seaweed extracts, minerals, trace elements, yucca extract & humates. + Additional sachet of swell gels.

## APPLICATION RATE

The object is to get an even coating of mycorrhizal spores over the root system. Add one 300g sachet of MycoForce to 2-3 litres of water, add swell gels, mix and leave for a few minutes until the mixture has the consistency of wall paper paste then dunk bare roots until coated in gel. 300gms will be enough for approx 100 bare root trees and 200 - 300 seedlings depending on size of root. (Use less Water for Seedlings)

## FOR BEST RESULTS

To get the best results from your plants, transplant into a soil or mulch high in organic matter. When planting into contaminated or compromised soils, contact our technical team for assistance with complementary soil amendments or soil bio-remediation. If applying fertiliser, use a low dose of slow release, preferably organic fertiliser, with a low phosphate content. Mycorrhizal plants do not need heavy applications of fertiliser. (See MycoForce fertilisers)

Mycorrhizal plants have a greater resistance to disease, however, if fungicides are needed, please refer to our advice sheet on fungicide compatibility and application. Herbicides and insecticides which do not harm the plant do not interfere with mycorrhizal fungal development.

## STORAGE

MycoForce Whip Dip will last at least 18 months if kept in a cool dry place. Do not freeze or expose to direct sunlight. Apply within 12 hours of mixing with water.

## SPECIES COMPATABILITY

\* All trees and shrubs except Rhododendrons, Laurels, Azaleas, and Ericaceous species

## TECHNICAL SUPPORT

For further information or advice on how best to incorporate mycorrhizal inoculants into your planting programme, please contact our team of biologists

## HEALTH AND SAFETY

Do not ingest or inhale dry dust. Wear a mask for nuisance dusts if long term inhalation is possible. If ingested, seek medical advice. Slippery when wet. Keep out of reach of children. In case of allergic reaction, seek medical advice.

## SMALL PRINT

Symbio offers MycoForce Whip Dip for sale but takes no responsibility for fitness for purpose which extends beyond the specification sheet or accompanying literature. Symbio is limited in liability to the replacement of any product that does not meet the label or data sheet specifications.

## PACK SIZE

1 x 300g sachet  
10 X 300g per box.  
1kg tub  
5kg tub  
10kg tub
