

Making your soil work for you

# MYCOFORCE STRESS SAVER

- ◆ Arrests decline for trees suffering from compaction, salt, drought
- ◆ Accelerates growth rates
- ◆ Increases plant growth in poor soils.
- ◆ Reduces need for fertiliser and fungicide
- ◆ Increases resistance to stress and disease

## AN INJECTABLE ECTO & ENDO MYCORRHIZAL INOCULANT WITH ROOT GROWTH PROMOTERS FOR MATURE TREES SUFFERING STRESS OR IN DECLINE.

### APPLICATION RATE

300gms per 200 sq.m. of canopy cover. i.e. 15gms per 10 sq.m. of canopy cover. Apply under the canopy at least to the edge of the drip line.

Mix 1 300 gms bag with 200 litres to 400 litres of water and apply by pressure injection machine at no more than 200 psi (12 bar) or via soil corer or auger into the upper 20 – 50cms of root zone. Apply at about 1 metre centres for large trees with a canopy over 100m<sup>2</sup> and 0.5 metre centres for smaller trees. If using a soil compaction reducer, relieve compaction first then apply MycoForce Stress Saver. Keep mix agitated during application, as it is not readily soluble

### CONTAINS

Endo Mycorrhizal species - *Glomus clarum*, *G. intraradices*, *G. mosseae*, *G. deserticola*, *G. monosporus*, *G. brasilianum*, *Gigaspora margarita*.

Ecto Mycorrhizal species - *Pisolithus tinctorius*, *Rhizopogon* sp. Biofixed beneficial soil bacteria and fungi, Biofixed beneficial soil bacteria and fungi, (*Bacillus* spp., *Pseudomonas* spp., *Arthrobacter* sp., *Acetobacter* sp., *Lactobacillus* sp., *Lactococcus* sp., *Comamonas* sp., *Nitrosomonas* sp., *Nitrobacter* sp., *Rhizopus* sp., *Phanerochaete* sp., *Saccharomyces* sp., *Sporotrichum* sp.,) Seaweeds extracts, minerals, trace elements, yucca extract, humates.

### STORAGE

MycoForce Stress Saver will last at least 18 months if kept in a cool dry place. Do not freeze or expose to direct sunlight. Apply within 8 hours of mixing with water.

### FOR BEST RESULTS

Apply as close as possible to new feeder roots. If the tree receives little nutrient, mix Symbio Liquid Seaweed with NPK at 100mls per 100 m<sup>2</sup> into the Stress Saver mix. Relieve compaction and mulch to the drip line where possible. If the soil is contaminated or compromised, contact our technical team for assistance with complementary soil amendments or soil bio-remediation. For further information or advice on how best to incorporate mycorrhizal inoculants into your planting programme please contact our team of biologists Mycorrhizal plants do not need heavy applications of fertiliser. Mycorrhizal plants have a greater resistance to disease, however, if fungicides are needed, please refer to our advice sheet on fungicide compatibility and application.

### SPECIES COMPATABILITY

All trees and shrubs except *Rhododendrons*, *Laurels*, *Azaleas* and *Ericaceous* species.

### TECHNICAL SUPPORT

For further information or advice on how best to incorporate mycorrhizal inoculants into your planting programme, please contact our team of biologists

### HEALTH AND SAFETY

Do not ingest or inhale dry dust. Wear a mask for nuisance dusts if long term inhalation is possible. If ingested, seek medical advice. Slippery when wet. Keep out of reach of children. In case of allergic reaction, seek medical advice

### SMALL PRINT

Symbio offers MycoForce Stress Saver for sale but takes no responsibility for fitness for purpose which extends beyond the specification sheet or accompanying literature. Symbio is limited in liability to the replacement of any product that does not meet the label or data sheet specifications.

### PACK SIZE

1 x 300g sachet  
10 X 300g per box.  
1kg tub  
5kg tub  
10kg tub
