

SYMBIO BACTERIAL ADDITIVE FOR COMPOST TEA

- Introduces a diverse population of bacteria into compost tea brews
- Produces bacterial dominant tea
- Improves growing media for annual plants
- Improves growing media for Brassicas
- Can be used as a foliar application or soil drench
- Recycles organic nutrients
- Increases nutrient availability for the plant
- Reduces nutrient leaching from the growing media.

Symbio Bacterial Additive For Compost Teas is a highly concentrated and diverse blend of bacteria designed to produce a bacterial dominant compost tea. Containing bacterial species that occur predominantly in younger soils, Bacterial Additive helps to create the biological conditions in soils and growing media that are required by annual plants and Brassicas.

Bacterial Additive helps to mobilise organic matter in the soil and makes nutrients more plant – available whilst reducing the leaching of soluble nutrients

SYMBIO BACTERIAL ADDITIVE FOR COMPOST TEA

Storage

Keep in supplied container and do not expose product to moisture or extremes of temperature.

Compatibility

Bacterial Additive can be used with any inorganic or organic fertiliser programme but is most compatible with organic fertilisers. The populations of bacteria in Bacterial Additive will be increased through the use of organic fertilizers and will in turn, rapidly make added organic nutrients available to the plant.

Bacterial Additive can be used with Symbio Foliar Tonics, Soil Tonics, and Mycorrhizal Inoculants.

Application and Dosage

Bacterial Additive is applied at 25gms per 100 litres of compost tea brewed.

Add the Bacterial Additive to the compost tea brewer at the start of the brew.

Bacterial Additive can be added direct to the brewer or added to the Compost Tea Bag or basket.

Apply as required, as a soil drench or foliar spray. 70% leaf cover is sufficient for foliar applications.

Visit www.symbio.co.uk for information on optimal brewing times for specific crops.
