

CHELATED IRON

Harden grass against wear and provide rapid green-up

BENEFITS

- For foliar application with hand-held sprayers and field sprayers at high or low water volume
- Promotes rapid 'green-up'
- Hardens the grass against wear and enhances disease resistance
- Ideal before tournaments or when aesthetics are critical
- Soluble Granular or Chelated Iron formulations

Symbio Chelated Iron

Can be used all year round when the soil is moist, if no rain is expected, irrigate after application.

Use before tournaments or when aesthetics are critical and at the onset of the disease season.

Do not apply in hot, dry weather or frosty conditions.

Application guide: *For best results consult your Symbio representative.

Symbio chelated iron

is an EDTA liquid formulation, rapidly assimilated by the plant to promote a very swift 'green-up' response.

Symbio EDTA chelated iron (6% Fe)

also hardens the grass against wear, whilst encouraging natural plant resistance. The chelated formula ensures the product is translocated into the plant effectively and prevents it from binding and 'locking-up' in the soil profile with other elements.
