

MYCOGRO 10.3.14 + 3.3%MgO + 2%Fe

Bio-Organic Fertiliser with a unique Blend of Rhizobacteria and Fungi

BENEFITS

- A total fertiliser package with soil fungi, bacteria, and zeolite for an excellent, healthy sward
- Promotes establishment of fescue, bent and rye grasses
- Increases plant tolerance to drought and stress conditions
- Faster grow-in and establishment of new grass seeds
- Healthy grass growing in a microbially active root zone is less susceptible to and recovers faster from disease

Symbio MycoGro 10.3.14 + 3.3% MgO + 2% Fe Spring Autumn and Winter fertiliser is a balanced granular fertiliser designed specifically to develop the biological and mycorrhizal activity of the soil and reduce fertiliser input. This unique blend includes beneficial rhizobacteria and carbon biostimulants rich in sugars to improve grass root growth, and stress recovery.

Application guide: *For best results consult your Symbio representative.

MYCOGRO FERTILISERS

Technical Information

MycoGro fertilisers are different from other fertilisers. They contain:

Rhizo bacteria and fungi
Biostimulants

What do the rhizo bacteria and fungi do?

Soil bacteria and fungi are essential to:
Convert ammonia to plant-available nitrate
Solubilise phosphorus
Degrade thatch and other organic matter, produce humus and recycle the nutrient as plant food
Assist nutrient uptake into the plant
Produce enzymes to help seed germination
Competitively exclude harmful fungi
Feed the nematodes and protozoa and other elements in the soil food web

What do the biostimulants in mycogro fertilisers do?

Our biostimulants come in different forms to:
Provide carbon to feed all the soil microbes
Increase the population of soil microbes
Improve soil structure
Increase plant photosynthesis and cell division

How to apply:

Aerate the turf before applying MycoGro fertilisers, oxygen may stimulate the microbes from the previous application to recycle enough nutrient to green up the grass. Degrading thatch also releases a lot of nutrient so only apply MycoGro fertilisers as required, you may only need 50-75kg of N per hectare. You will find that your nitrogen requirement will drop with regular use.

Apply 25g - 35g/m² as required. Less may be needed if used with a full Symbio programme

MycoGro should be watered in to activate the microbes

Apply when necessary to enhance new root and shoot development

The Spring, Autumn and Winter fertilisers contain powerful biostimulants

Use Symbio's autumn and winter fertilisers for your nutrition and disease management programme. On soil greens for enhanced cultural management of fusarium use MycoGro autumn and winter feeds
For best results on thatchy greens and pitches, MycoGro Complete should be used with Symbio ThatchEater

To maintain excellent greens and pitches, use with Symbio GreenCircle

For newly seeded or turfed areas, apply Mycorrhizal Inoculant

For tees, collars, surrounds and less heavily trafficked areas, use MycoGro Complete as your usual fertiliser
