

MYCOGRO 12.0.9 +1%Fe

Fertiliser with added mycorrhizae, soil fungi and bacteria to add life to soil. With additional Thatch Eating and Phosphate solubilising bacteria and fungi

BENEFITS

- With additional thatch eating fungi and bacteria
- Fungi convert thatch, dead moss and grass clippings to humus
- Bacteria solubilise and retain nutrients
- Assists germination
- Creates the biology needed for perennial grass growth

Symbio MycoGro 12.0.9 +1%Fe is designed to give immediate growth with a long lasting slow release element. Ideally applied in late spring or early summer, but can applied throughout summer.

Slow growth and fine grasses

Soil fungi are essential for the health of fescue, bent, rye and perennial Poa grasses. They colonise the roots and increase the surface area for nutrient and water uptake.

Application guide: *For best results consult your Symbio representative.

Foundation for healthy soil

We put the foundation of the soil food web into your rootzone by adding beneficial soil fungi, rhizobacteria, carbon, biostimulants and sugars. This encourages beneficial nematodes and protozoa to reproduce and grow, maintaining healthy friable soil and helping to degrade thatch, promoting disease resistance and recycling nutrients.
