

OIL DEGRADER

A powerful blend of microbes and nutrients capable of degrading the full complement of polluting hydrocarbons, both mineral and volatile. Can be used to treat contaminated surfaces, soils and water

BENEFITS

- Rapidly degrades mineral oils and diesel
- Degrades phenols
- Degrades volatile aliphatic, aromatic, heavy aliphatic, chlorinated and bromated hydrocarbons
- Water-soluble for use as a spray or solid application
- Supplied with own water-soluble nutrients for one stop application

How to apply:

Apply at a rate of 50g/m³ of contaminated soil or liquid

For Higher levels of contamination apply at a rate of 100g/m³

For further information or specific application rates contact Symbio with details of the decontamination project

Symbio Oil Degradation

is composed of a blend of efficient hydrocarbon degrading microbes combined with soluble nitrogen and phosphorus containing nutrients. The product can be mixed dry into soils or dissolved in water and sprayed onto the contaminated area.

All the bacteria in the product are facultative and have the ability to adapt to most soil conditions. The best degradation results are obtained under aerobic conditions. If adequate aeration of the contaminated material is not possible, Oil Degradation can be used with Symbio Liquid Aeration.

OIL DEGRADER can be used in soils containing up to 20% total hydrocarbon content.
