

PHYTOGRO 0-0-18

3 in 1 Biostimulant to repair dry patch and disease scarring, stimulate microorganism activity and plant growth, and aid water penetration

BENEFITS

- For rapid recovery of disease scarring and dry patch damage
- Promotes the growth of healthy turf, less susceptible to stress
- Provides long lasting green-up
- Contains wetting agents to aid water penetration and prevent dew formation
- Use as a treatment or a preventative

Symbio Phytogro may be used alone or as part of a biological treatment program to solve underlying problems. Dry patch and plant diseases are symptoms of problems in the rootzone and sward.

Symbio Phytogro employs a unique combination of: fatty acids, fruit acids and vitamins with a wetting agent/penetrant and foliar potassium.

Biostimulants to promote the production of plant hormones essential to combat stress caused by disease and dry patch.

Wetting agents to aid water penetration and dispersal Potassium to increase cell production and harden the sward.

Technical Information

How to apply:

20L/ha in 400 - 600 L of water

To help condition your turf against dry patch and disease

Apply once every 4 weeks approaching and during the time turf diseases and dry patch are expected

Immediate action treatment to aid recovery

Apply at first signs of dry patch or disease to strengthen unaffected grass

For best results degrade surplus thatch and outcompete pathogens with Symbio THATCHEATER or GREENCIRCLE, use fertilisers efficiently and ensure that excess nutrient has been utilised for plant growth before the disease season arrives.

Areas of use

All turf areas including golf and bowling greens, tees, approaches, surrounds and fairways, summer and winter season pitches. Particularly for stressed turf suffering frequent disease attacks. Phytogro is suitable for all turf species..

“One of the best products on the market. Summer growth in the winter to aid with recovery without stressing the plant. I would recommend it to anybody, I couldn’t believe my eyes”.
