

ROOT REPAIR

Improve plant health and vigour - particularly root growth - and encourage rapid recovery from disease and nematode damage

BENEFITS

- Stimulates root growth to promote rapid recovery from nematode damage
- Improves resistance to freeze – thaw damage
- Stimulates photosynthesis for improved root and shoot growth
- Stimulates the growth of beneficial fungi, bacteria and nematodes
- Provides an organic source of nitrogen
- Acts as a chelating agent in the soil

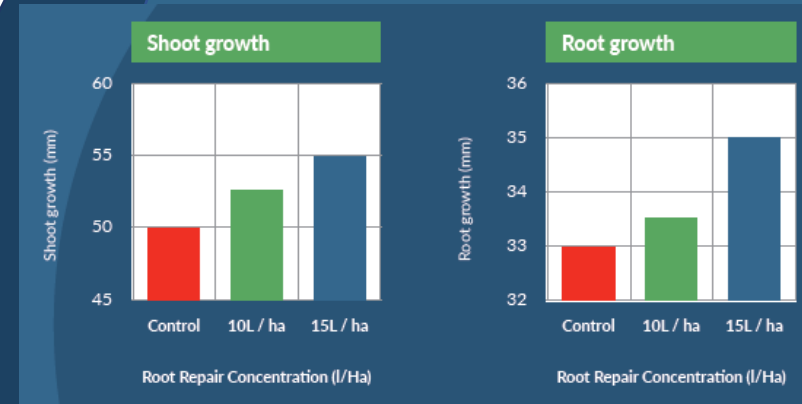

Spring

October

ROOT REPAIR

Technical Information

Symbio Root Repair

is a plant tonic comprising a solution of complex carbohydrates and organic amino nitrogen that stimulates a variety of beneficial metabolic processes in the plant. The complex carbohydrate in Root Repair provides a food source for beneficial soil bacteria, fungi and nematodes.

Symbio Root Repair

increases tolerance to freezing conditions by bolstering the plants own immune system, due to enhanced microbial activity.

Symbio Root Repair

has a net positive charge making it a chelating agent in soil as well as helping to hold foliar plant applications on the leaf.

How to apply:

To repair roots after nematode and stress damage

Apply at a rate of 15 L/ha in 400-600 litres of water. Apply 3-4 applications with a two week interval

As a plant tonic

Apply at a rate of 2.5 - 10 L/ha every 14-28 days as required in low light, spring & late autumn. Use higher dose for sandy root zones

As a freeze protectant

Apply 10 - 15 L/ha every 7-14 days in the month before frosts expected. Reapply between frosts & snow

Root repair can be applied with compost teas, to boost soil biology
However: **DO NOT APPLY DIRECTLY TO THE BREW**

Root Repair can be applied with liquid feeds for improved foliar uptake
Conduct a bucket test before tank mixing
