

ORGANIC SSD 8.0.0 + 2.5% Fe + 0.5% Mg

Nitrogenous fertilisers with humates and organic nutrients derived from animal origin i.e. Hoof and horn 10% & blood meal 2.5%.

BENEFITS

- High performance plant and soil nutrients
- Encourages root and shoot development
- Helps reduce environmental plant stress
- Excellent microbial biostimulant and chelating agent
- Low salt index. Ideal for use with high conductivity water and soils

SYMBIO SSD 8.0.0 + 2.5% Fe + 0.5% Mg

contains magnesium and iron to promote and improve turf colour. Recommended for use in the spring and summer.

Symbio SSD fertilisers

promote root and shoot development and help the plant combat stress. The added humates are excellent chelating agents making the nutrients more available to the grass. Symbio SSD fertilisers may be applied through all conventional spreading equipment. The humates and organic nutrients in Symbio SSD fertilisers feed the bacteria and fungi that form the base of the soil food web, promoting plant health and vigour. This encourages nutrient retention, promotion of perennial grasses and thatch degradation. They will also improve soil friability for increased root development and faster percolation. The inorganic content provides immediate nitrogen release, while the organic content provides slow release nitrogen for up to 8 weeks.

Application guide: *For best results consult your Symbio representative.
