

MYCOFORCE MYCORRHIZAL WHIP DIP

An Endo (Vam) And Ecto Mycorrhizal Inoculant For Almost All* Whips, Bareroot Trees, Shrubs, Seedlings, Cuttings And Small Containerised Plants. Easy To Apply As A Root Dip Just Before Planting.

BENEFITS

- Improves transplant survival rates
- Accelerates growth rates
- Increases plant growth in poor soils
- Reduces need for fertiliser, fungicide and water
- Increases the natural vigour and health of the plant

CONTAINS

Contains 9 species of endomycorrhizal fungi and 9 species of ectomycorrhizal fungi, together with beneficial soil bacteria and fungi, Zeolite and Trace Elements.

Additional sachet of swell gels.

FOR BEST RESULTS

Mycorrhizae help establish plants in poor quality soils but to get the best results from your plants, transplant into a soil high in organic matter.

Mycorrhizal plants have a greater natural health and vigour. Healthier plants are more resistant to disease.

100g will treat 220 bare root trees and up to 2000 seedlings.

Acer palmatum

Treated

MYCOFORCE MYCORRHIZAL WHIP DIP

TECHNICAL INFORMATION

APPLICATION RATE & DIRECTIONS

To make sufficient Dip for 220 whips or 1000 seedlings:

Add 1 hydrogel sachet to 3-6 litres of water* which will form a light paste after a few minutes. Thoroughly mix 100g of Whip Dip powder into the paste. Dip bare-root whips just before planting. (If dipped offsite, cover roots in plastic during transport)

*Actual hydrogel and water requirement will depend upon water hardness and plant root mass

100g will treat 220 bare root trees and up to 2000 seedlings.

If fungicides are needed, please refer to our advice sheet on fungicide compatibility and application. Herbicides and insecticides which do not harm the plant do not interfere with mycorrhizal fungal development.

When planting into contaminated or compromised soils, contact our technical team for assistance with complementary soil amendments or soil bio-remediation. If applying fertiliser, use a low dose of slow release, preferably organic fertiliser, with a low phosphate content. Mycorrhizal plants do not need heavy applications of fertiliser. (See MycoForce fertilisers)

SMALL PRINT

Symbio offers MycoForce Whip Dip for sale but takes no responsibility for fitness for purpose which extends beyond the specification sheet or accompanying literature. Symbio is limited in liability to the replacement of any product that does not meet the label or data sheet specifications.

TECHNICAL SUPPORT

For further information or advice on how best to incorporate mycorrhizal inoculants into your planting programme, please contact Symbio.

STORAGE

MycoForce Whip Dip will last at least 18 months, prior to mixing, if kept in a cool dry place. Do not freeze or expose to direct sunlight. Apply within 12 hours of mixing with water.

SPECIES COMPATABILITY

* All trees and shrubs except Laurels, Rhododendrons, Azaleas, all other ericaceous species, orchids and brassicas.
