

BACTERIAL ADDITIVE FOR COMPOST TEA

Symbio bacterial additive for compost tea is a highly concentrated and diverse blend of bacteria designed to boost populations of bacteria and produce a bacterial dominant compost tea

BENEFITS

- Introduces a diverse population of bacteria into compost tea brews
- Improves growing media for annual plants
- Recycles organic nutrients
- Increases nutrient availability for the plant
- Reduces nutrient leaching from the growing media

Bacterial Additive contains bacteria that only occur naturally in very mature composts or old, undisturbed soils.

Bacterial Additive helps to mobilise organic matter in the soil and makes nutrients more plant–available whilst reducing the leaching of soluble nutrients.

The inclusion of Bacterial Additive when brewing compost tea, will produce a compost tea that has a high bacterial population, encouraging the growth of annual plants.

Application guide: *For best results consult your Symbio representative.

Add to Compost Tea

Add to the compost tea brewer at the start of the brew

Bacterial Additive can be added direct to the brewer or added to the Compost Tea Bag or basket

If brewing for longer than 12 hours add 20g sugar or molasses per 50g Bacterial Additive to the brew

To maintain *Poa annua*, apply Bacterial Additive to your compost tea throughout the year

To maintain perennial grasses, apply Bacterial Additive to your Compost Tea at the start and end of the growing season

Do not apply within one week of a biocide application
