

# FUNGAL ADDITIVE FOR COMPOST TEA

Symbio Fungal Additive for Compost Tea is a highly concentrated and diverse blend of fungi and bacteria designed to boost lignin degrading fungi

## BENEFITS

- Introduces diverse fungi and bacteria into compost tea brews
- Replaces beneficial soil fungi lost through excessive use of inorganic fertilisers
- Creates fungal rich soils needed for perennial grass growth
- Degrades thatch
- Recycles organic nutrients and increases nutrient availability for the plant

Fungal additive contains fungal species that only occur naturally in very mature composts or old, undisturbed soils. Fungal additive helps to create the biological conditions in soils and growing media that are required by perennial grasses, particularly fescue, bent and rye grasses; and promotes the establishment of mycorrhizal fungi. Fungal additive helps to mobilise organic matter in the soil and makes nutrients more plant-available whilst reducing the leaching of soluble nutrients.

**Application guide:** \*For best results consult your Symbio representative.

J	F	M	A	M	J	J	A	S	O	N	D

**For sand based and 80/20 rootzones**  
apply at up to 1kg/ha

**For Soil pitches, fairways etc**  
apply at 250g/ha

**Add to Compost Tea**  
Add to the compost tea brewer at the start of the brew

**Fungal Additive can be added direct to the brewer or added to the Compost Tea Bag or basket**

**Apply as a soil drench – every 3-4 weeks**

**Do not apply within one week of a fungicide application**

**PACK  
SIZE:  
1kg 5kg**

500g – 1kg / ha
