

SYMBIO BIOBOOSTER N

Benefits

- ✓ *Combined fast and slow release Nitrogen source 28.0.0*
- ✓ *Increased shoot and root development*
- ✓ *Improved plant nutritional health*
- ✓ *Provides sustained 'Green-up'*
- ✓ *Promotes beneficial soil microorganisms*
- ✓ *No impact on substrate pH*
- ✓ *Will not scorch or burn*

SYMBIO BIOBOOSTER N contains 28% w/w nitrogen. 70% of the total nitrogen is in the slow release form of Methylene di-urea, which is broken down and released by microbial action. 30% is fast acting Ureic Nitrogen which is immediately available to the plant. Symbio BioBooster N has a low surface run off and leaching potential. 8.4% Ureic Nitrogen & 19.6% Methylene di-urea

SYMBIO BIOBOOSTER N has two modes of action; slower and fast release urea forms, which provide a complete and sustained system of feeding the plant, encouraging and promoting the beneficial soil microbes whilst ensuring healthier and longer lasting plant root and shoot growth. Symbio BioBooster N also provides sustained 'green-up' ideal for tournaments, aesthetics and appearance of the playing surface.

PACK SIZE: 20L

SYMBIO BIOBOOSTER N provides an excellent source of plant Nitrogen, promotes the soil food web and mineralisation, without causing excessive soft growth. Symbio BioBooster N will not scorch or burn the grass plant and has no impact on the substrate pH. The liquid formulation has a lower salt index and consequently is far less detrimental than other inorganic high Nitrogen formulations. Symbio BioBooster N will not create osmotic stress to either the plant or beneficial soil microorganisms.

SYMBIO BIOBOOSTER N can be tank mixed with Compost Teas, Biostimulants and most other Symbio Products.

LONGEVITY of Symbio BioBooster N is expected to be between 4-8 weeks, but may last up to 10 weeks in some conditions; depending upon substrate type, amount of organic matter, ambient conditions and the quantity of beneficial soil microbes.

APPLICATION AND TIMING

Apply as required at a rate of 20L- 50L per hectare during the growing season.

Foliar Application

Dilute in 250 – 300L of water per hectare. Do not water in after application.

Soil Drench

May be tank mixed with Bio stimulants and Compost Tea in 500-600L water

Always conduct a bucket test before mixing.

It is not necessary to irrigate and water in after application.

Precaution

IF SWALLOWED Rinse Mouth, Do not induce vomiting

IF ON SKIN Gently wash with plenty of soap and water

IF IN EYES Rinse cautiously with water for several minutes
