

SYMBIO

SYMBIO LIQUID HUMIC BOOSTER

Increase populations and activity of beneficial microorganisms and degrade thatch, promoting the growth of fine grasses.

BENEFITS

- Stimulates beneficial fungal populations to promote fine grass and degrade thatch
- Aggregates soil
- Improves soil structure and CEC
- Chelates magnesium, calcium and iron to improve nutrient absorption

Symbio Humic Booster is a soil and foliar treatment rich in humates, humic and fulvic acid and potassium (contains 2.5% K₂O by weight of dry matter)

Humates, humic and fulvic acids

are a major part of soil organic matter and can be used to stimulate beneficial soil fungi populations, increase soil cation exchange capacity and provide organic and mineral plant nutrients for improved plant growth.

In sand rootzones

readily available humate substances are limited and should be added regularly during the growing season to feed the fungi and bacteria that form the foundations of the soil food web.

Application guide: *For best results consult your Symbio representative.

SYMBIO

SYMBIO HUMIC BOOSTER

Technical Information

Symbio Humic Booster Liquid

How to apply:

Can be applied as a foliar feed

- 5-10 L/ha in 300 – 400 litres water

Can be applied as a soil drench

- 5-25 L/ha in 400 – 600 litres water

Humic Booster

is a natural substance and small particles may not dissolve. We recommend that you allow any sediment to settle out or pass the liquid through a filter before adding to the spray tank.

Humic Booster

may be combined with all Symbio microbial additives and compost teas. Always test mixes before adding to spray tank, especially before mixing with any inorganic products – Complete a bucket test.

Symbio Humic Booster Powder

How to apply:

Can be applied as a foliar feed

- 1-2kg/ha in 300 – 400 litres water

Can be applied as a soil drench

- 2-5kg/ha in 400 – 600 litres water

- Pre-dissolve Humic Booster in 10 -20 litres of warm water stirring well before adding to spray tank. Ensure the Humic Booster is fully dissolved before adding to the spray tank.
- Humic Booster is a natural substance and small particles may not dissolve. We recommend that you allow any sediment to settle out or pass the liquid through a filter before adding to the spray tank.
- Humic Booster may be combined with all Symbio microbial additives and compost teas.
- Always test mixes before adding to spray tank, especially before mixing with any inorganic products – Complete a bucket test.
